

Environment

Responsibility and respect for the environment and our planet are some of our core values. We want to limit our impact on the environment as much as possible. That is why all our strategic choices and operational decisions consciously take into account the rational use of energy and resources, sustainable development and the protection of biodiversity.

We are also joining the fight against climate change. We generate low-carbon electricity, and we are making efforts to further reduce the carbon footprint of our organisation.

Our commitment to the protection of the environment is based on the following principles:

IMPLEMENT

- We respect environmental laws and regulations.
- We strive to continuously improve our environmental performance by clearly choosing for EMAS registration for our nuclear power plants.
- We focus on eco-friendly and energy-efficient solutions at every stage of the life cycle of our installations.
- If nuclear operation is definitively stopped, we eliminate the environmental risks as early as possible in the decommissioning phase.

KEEP UNDER CONTROL

- We register and monitor the environmental impact of our activities closely.
- We analyse and prevent environmental risks.
- We formulate objectives and draw up action plans to minimise the environmental impact of our activities.

ORGANISE

- We embed environmental care in all our organisation's processes.
- We promote initiatives and encourage all our employees, partners and subcontractors to act in favour of the environment.
- We reinforce our environmental culture through training, awareness campaigns, and instructions.

COMMUNICATE

- Our communication evolves in line with our organisation and the expectations of our stakeholders.
- We conduct a constructive dialogue with government authorities, environmental organisations, and local residents.
- We communicate regularly and transparently about the environmental performance of our activities.
